Case Study

WHY CHOOSE PACOM?

PACOM is an innovator in the field of electronic security with a focus on exploiting the rise of IoT and smart technology. In a market dominated by in situ systems that use legacy technologies that are often incapable of integration, PACOM has identified a way to make use of smart devices and SaaS cloud technologies to bridge the integration gap.

PACOM's R&D team are pioneers in the area of IP security. They have developed a product portfolio utilizing the latest tools and technologies, all of which are modular, cost-effective, and provide easy integration.

CLIENT

BACKGROUND

The Finance and Leasing Client was established in Thailand in 1994 and is a leading financial company engaged in personal loans, motorcycle loans, and mortgages.

SOLUTION

PACOM VIGIL CORE is an intelligent, centrally-controlled network designed primarily for managing thousands of unmanned sites that make up a significant part of the asset base of any organization.

Visitor Management System

The PACOM Visitor Management System is a software solution within PACOM VIGIL CORE designed to quickly and accurately identify visitors in facilities with a high frequency of guests or a high level of security.
It communicates with PACOM ID Cameras and inputs data to automatically populate visitor data fields and capture live photographs using desktop cameras.

Visitor Kiosk

The PACOM Visitor Kiosk is a comprehensive solution designed to quickly and accurately identify visitors. Together with the Visitor Management System it is used for buildings with a high frequency of guests, where elevated security requirements and/or real-time monitoring and reporting are required. The Visitor Kiosk is an efficient way for organizations to enhance their visitor management strategy. With intelligent integration with PACOM VIGIL CORE, high-speed image acquisition, face detection, face mask tracking, and human body temperature detection are possible. Compatible with any modern smart device with the latest browser technology, the PACOM Visitor Kiosk is configurable to comply with any corporate requirements.

Consolidated Cloud-Based Monitoring

PACOM VIGIL CORE is a web-based application that resides in a central location or the cloud and provides the collection point for all events from the S1000 Controller. VIGIL CORE monitors security/access alarms, telemetry activity, and data gathering from the doors connected to the S1000 located at each cell site and prioritizes events for multiple operator workstations.

LOCATION

The Finance and Leasing Client's current headquarters is located in Bang Rak, Bangkok, Thailand.

INDUSTRY

Credit and loans

CHALLENGES

- » Managing visitor access in and out of buildings
- » Monitoring and controlling visitor traffic
- » Use of a high availability system with little or no downtime/outages
- » Minimal business interruption during a short implementation period
- » Web-based/mobile application - providing end-user control from anywhere
- » Compliance with corporate cyber security policies

SOLUTION SUMMARY

- » Visitor management system
- » Self-service visitor kiosk
- » Intelligent IoT devices
- » Centrally managed alarms
- » Centrally managed access control platform
